SLS-86 Series

Bit processing

The PLC-series SLS-86 is a central and/or distributed PLC system with a modular concept. HI-86 is the compact control of the SLS-86 series.

The base module allows easy and cost-effective communication with up to 31 different expansion modules over a bus length of up to 600m. The modules can be connected either locally by recessed side connectors for side by side DIN rail mounting or remotely via CAT5 cable.

SLS-86 base module

Programming without special software knowledge, suitable for small (8/6 I/O) and medium sized (up to 250 I/O) applications.

The **SOLUTION SLS86** is a modular programmable (intelligent) relay that can be used in many fields including **industrial control, automation, and building management**. The **base module SLS 86** has 8 digital inputs (4 dual digital or analogue), and 6 relay outputs.

The user program memory is 8kB with 64kB internal flash and a SIM-card for program copy and module to module data transfer.

A range of **extension modules** (digital, analogue, PTC, PT100, PT1000, FBR) is available. Output types are relay, photomos (solid state) or transistor.

The base module can communicate with up to 31 extension modules via recessed side connectors for side by side DIN rail mounting (**local**) or via CAT5 cable (**remote**). Up to 250 I/O can be distributed over a maximum distance of 600m. Analogue values can be set by potentiometers located on the front plate or by PC. Communication with HIQUEL TERM4 is possible using the host switches and host relay functions.

The **HI-86** is a compact programmable (intelligent) relay that can be used in many fields.

The **minimodule HI-86** has 8 digital inputs (20-250Vac/dc) and 6 relay outputs (5Amp). The user program memory is 8kB. The RS 232 interface can be used for programming and monitoring. The HI-86 also features a SIM-card for easy program copy and module to module data transfer.

SLS-86 expansion modules

Connection: local and remote versions of all modules available

- digital input modules 24Vdc or 100-240Vac
- digital output modules, relays, transistor or photomos
- analogue I/O modules 0-10V or 0-20mA
- temperature detection modules for PTC, Pt100- and PT1000 sensors
- 16bit analogue input modules; 0-10V or 0-20mA
- room temperature detection modules with 4 inputs
- room temperature controller

Applications:

- industrial automation
- process control
- building automation
- transport system
- machine control
- pump control
- lighting control
- heating control
- hydraulic systems
- bespoke systems

Programming

SoftWIRE and SoftwirePLUS are programs that are simple yet powerful CAD style wiring ladder diagram programs.

Series: SLS-86, HI-86

SoftwirePLUS:

Programming without special software knowledge.

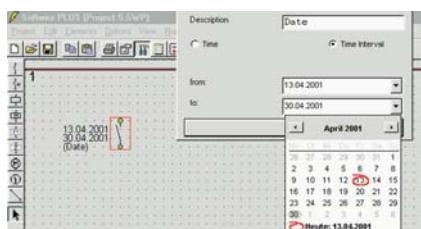

The SLS-86 base module is programmed with SoftwirePlus, using the principle of a wiring ladder diagram for programming.

Many pre-programmed software modules are included such as star-delta start, DOL (direct on line) motor start, timing functions, output functions (on/off, set/reset, bi-stable), counters (non-volatile and volatile with 8 set points each) and a universal real time clock with calendar. The **Real Time Clock** can be programmed easily for point of time switching, (to perform a function at a fixed time/date) or time interval switching, (to perform a function between two times, dates, weeks, years etc). Days of the week, weeks of the year, days, months, years, date and time can be combined without problems.

SoftwirePlus features on-line monitoring and status display of all I/O's and internal program elements on the PC. It also automatically creates **complete paper documentation** (wiring diagram, program elements and cross-reference list).

All program element addresses are automatically allocated and it is simple to change the screen and printout language into English, German, Italian

RTC with calendar function:
days of the week, days of the month,
days, months, years, date, time

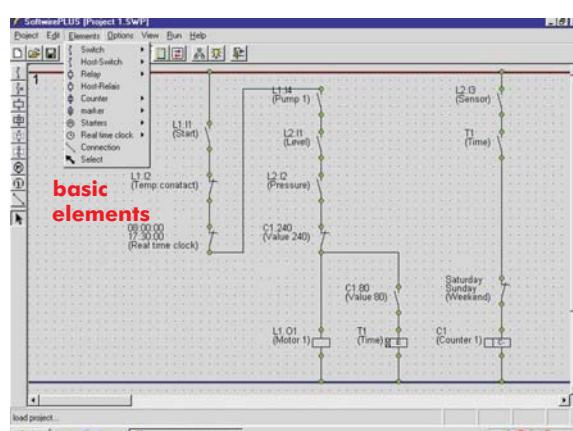

System configuration:

up to 31 I/O modules possible

Simple-to-use CAD style ladder diagram software: automatic addressing, simple editing of wiring scheme

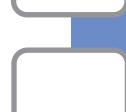

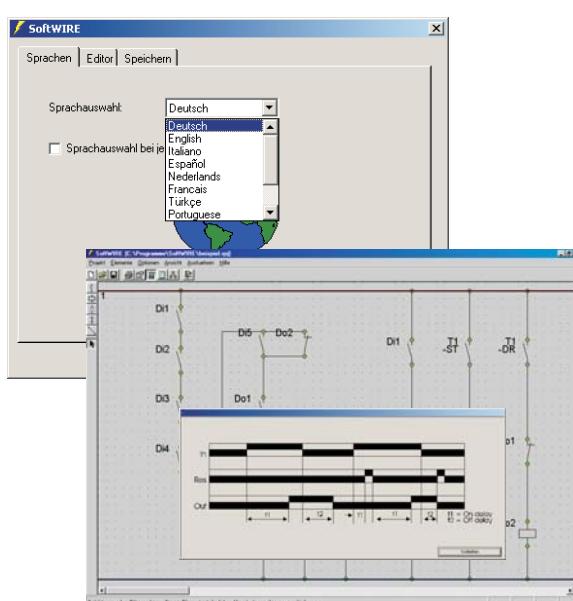

SoftWIRE:

Programming without special software knowledge.

The compact module **HI-86** is programmed with SoftWIRE offering easy programming via wiring diagram.

A graphic symbol library for functions and settings are included in SoftWIRE software.

There is no limitation of program elements on a ladder rung and of the number of circuit paths. SoftWIRE automatically generates a printable version of the project description and the module wiring diagram as well as a cross reference list. SoftWIRE features simple language selection by

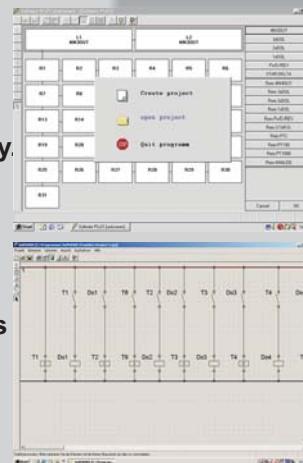

Programming with SoftWIRE and Softwire PLUS

Bit processing

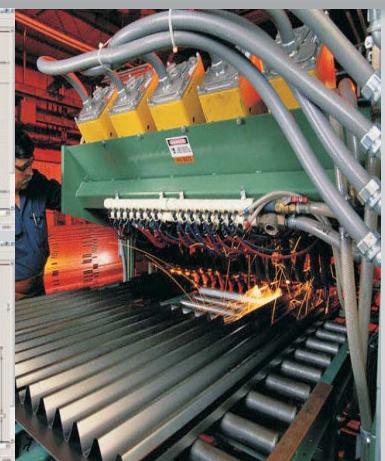

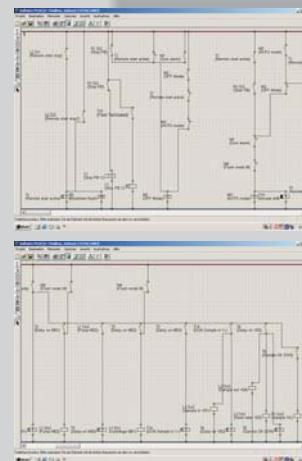

Programming by wiring ladder diagram, SLS-86

Building technology

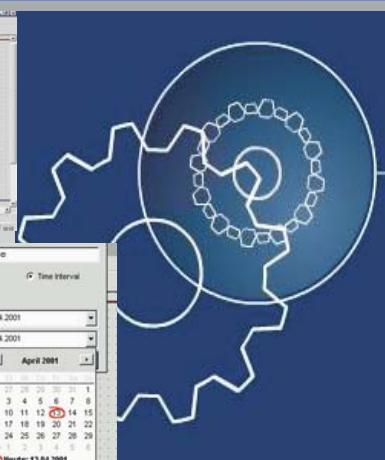

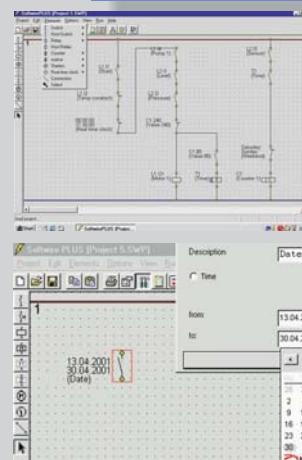

- Easy programming by ladder diagram
- SLS-86 modules can be either locally or remotely connected via internal RS485 network in an easy and cost-effective way.
- Complete paper documentation is automatically created.
- Easy and cost-effective communication with up to 32 different extension modules over a bus length up to 600m.

Transport system

- The modules can be either local (plug connections) or remote connected (CAT5 connection).
- Material handling control for complex applications processing large data volumes, e.g. analogue values, status of counters or time parameters.
- Changes of values directly on the PC or display.
- The modular structure allows flexible adaption to changes in the transport process.

Machine control

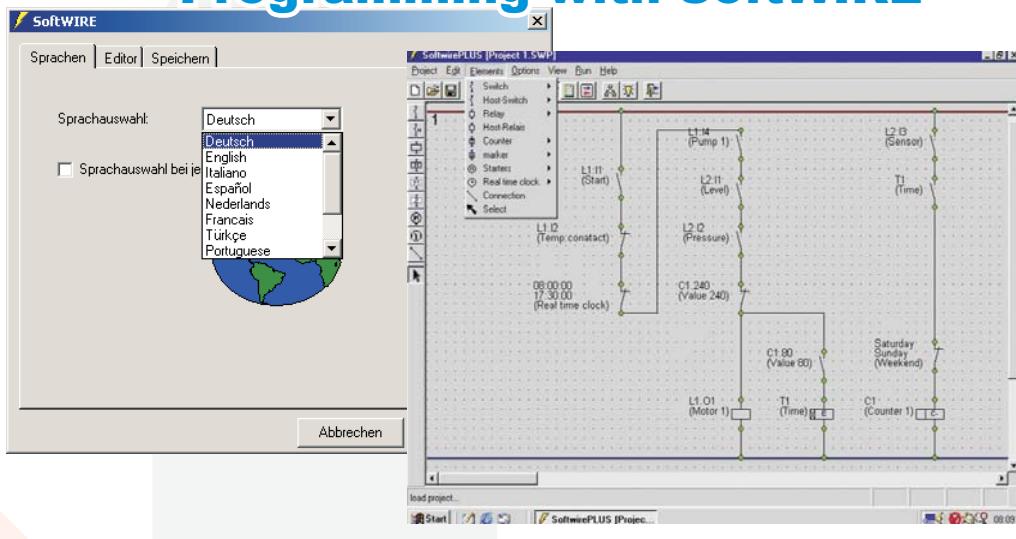

- Stepper motor control
- Up and down counters
- Preselection counters
- External fieldbus connectivity using the host input and host output functions.
- Optimised display layout and automated address allocation for easy handling.
- Direct coupling via integrated RS232 to PC or text display.

Compact module

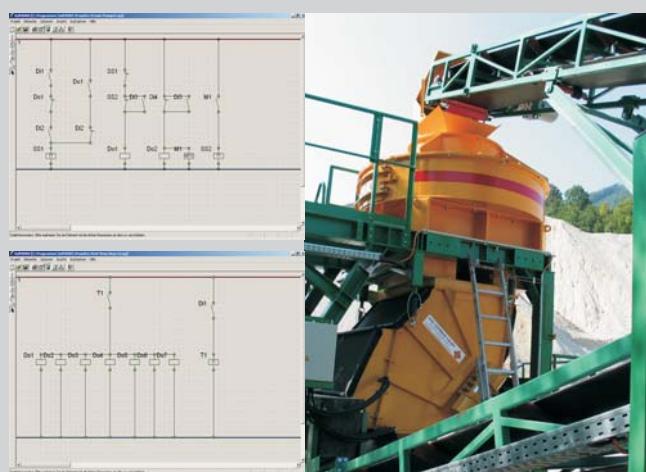

HI-86 minimodule

Programming with SoftWIRE

Machine control

- Easy programming via wiring diagram (ladder) with SoftWIRE.
- Manual settings can be adjusted easily without PC using the external potentiometers (2) located on the front plate.
- Simple documentation (printing).
- Ideal for controlling pumps, heating , hydraulic systems, lighting...
- Language selection by mouse click: German, English, Italian, Spanish...

Process control

- Programming without PLC knowledge, suitable for small applications.
- Graphic symbol library for functions and settings. Simple tool bar "drag & drop" selection.
- Easy and flexible program exchange without PC is guaranteed with SIM memory card (2kB user-program memory).
- No limitation of program elements on ladder rungs or function blocks.
- LED indicators for inputs, outputs, supply voltage stop and error.

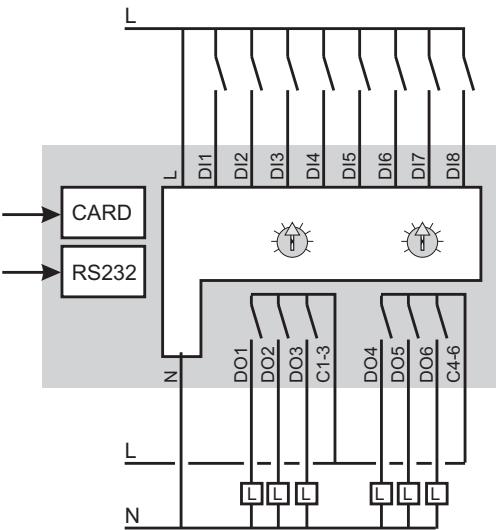

HI-86 mini module and starter kit

all you need to get you going - a starter kit:

- ◆ HI-86 minimodule
- ◆ serial interface cable (programming cable)
- ◆ CD-ROM SoftWIRE
- ◆ SIM-Card
- ◆ input simulator
- ◆ manual

The compact programmable (intelligent) relay HI-86 is programmed with "SoftWIRE" wiring diagram and can be used in many fields. The minimodule HI-86 has 8 digital inputs (20-250Vac/dc), 6 relay outputs (5Amp)and a 8kB user program memory. The RS 232 interface can be used for programming and monitoring. It also features a SIM-card for easy program copy and module to module data transfer.

- ◆ compact intelligent relay module
- ◆ supply voltage 20-250V~=(10-40V= on request)
- ◆ 8 digital inputs 20-250V~=(10-40V=)
- ◆ 6 SPNO outputs max. 5A
- ◆ LED indicators for inputs and outputs
- ◆ 2 potentiometers
- ◆ 8kB user-program memory
- ◆ 16 timers
- ◆ 8 counters
- ◆ 14 pre-programmable timing functions
- ◆ 67.5mm DIN rail mount housing
- ◆ graphic programming with 'SoftWIRE' using wiring(ladder) diagram

analogue output spec.	0 - 10V= max. 2mA resolution 10 bit
repeat accuracy	0,1%
precision	±0,5%
analogue input spec.	0 - 20mA resolution 12 bit
input resistance	250 Ohm
protection class	terminals IP20 housing IP50
screws	pozidrive 1
screw tightening torque	0,6..0,8 Nm
weight	120g
dimensions	45 x 85 x 75mm
operating conditions	-15 to +55 °C non condensing

ordering information

part no	type	supply	input	inp. galv. iso.*	output	outp. galv. iso.*	housing types
SLS-AI-C	local	24V=	4x 0-20mA	no	4x trans. PNP	no	C
SLS-AI-D	remote	24V=	4x 0-20mA	no	4x trans. PNP	no	C

* The ordering information for various sensors you will find on page 03:23.

* measurement input galvanically isolated from the power supply
